Education

SRM University

Bachelor of Technology in Electronics & Computer (9.06/10 cgpa)

Sep. 2021 – May 2025

Chennai, TN

Relevant Coursework

- Data Structures
- Object Oriented Programming
- Algorithms Analysis
- Database Management
- Artificial Intelligence
- Internet Technology
- Systems Programming
- Computer Architecture

Experience

Visteon

Software Engineer Intern – C++, Java, Appium, Iperf, AOSP

Jan. 2025 – July 2025

Chennai, TN

- Developed a script using **Appium** and **Python** to automate to validate throughput scenarios across android devices in **automotive** environments .
- Prioritized network bandwidth for services like carplay, android auto using **Linux tc** and **HTB**, dynamically executing tc commands via **Java** APIs in **AOSP** to allocate bandwidth to projection devices.
- Contributed to **C**, **C++** hackathons and got awarded cash prize for best team and implemented the core logic adhering to **MISRA** code standards.
- Developed code for automotive systems to validate and verify the throughput and bandwidth connections using **Iperf** and **Android studio**

VMG Digital

Front End Developer Intern – Javascript, Typescript, Angular, Firebase

Dec. 2023 – Jan. 2024

Chennai, TN

- Contributed in development of the company's employee portal using **Angular** framework, added user validation to login details.
- Worked with **Google Firebase** to manage user inputted data across multiple platforms including web and mobile apps.
- Collaborated with team members using version control systems such as **Git** to organize modifications and assign tasks.

Projects

Employee Management System | Java, Spring Boot – Jul 2025

- Engineered a scalable and maintainable **RESTful API** for employee data management using **Java**, **Spring Boot**, and **MySQL**.
- Developed end-to-end **CRUD** operations with **Spring Data JPA**, implementing layered architecture: Controller–Service–Repository.
- Integrated input validation, custom exception handling, and meaningful error responses to ensure **robust backend** behavior.
- Utilized **Postman** for testing and documenting API endpoints, improving development efficiency and QA readiness.
- Applied industry best practices including modular code design, clean architecture, and separation of concerns for scalability.

Technologies & Tools: Java, Spring Boot, Spring Data JPA, MySQL, REST APIs, Postman, Git, Object-Oriented Design, API Testing

Portfolio Website | Angular, Firebase – Jan 2024

- Developed a dynamic, single-page portfolio web application to showcase technical skills, personal projects, and professional experience as a web developer.
- Built using **Angular**, **TypeScript**, and **Angular Material** for modular structure and responsive UI components.
- Integrated with **Google Firebase** for backend services including **Realtime Database**, **Authentication**, and **Hosting**.
- Applied **CSS Flexbox/Grid** for mobile-first, responsive layout and consistent visual design.
- Connected frontend to backend using **REST APIs**, demonstrating full-stack capabilities.
- Utilized **Git** for version control and collaborative workflows, following best practices in branching and commit management.

Technologies & Tools: Angular, Angular Material, TypeScript, Firebase, CSS, REST APIs, Git, GitHub, Responsive Design

Technical Skills

Languages: C++, Java, C, JavaScript

Developer Tools: VS Code, Eclipse, Google firebase, Android Studio

Technologies/Frameworks: Linux, GitHub, SpringBoot, Angular, CSS flexbox, RESTful APIs

Achievements

- Awarded as the top team with a cash prize of 25K for the C hackathon, Got into the top 5 teams all over India in the C++ hackathon "fleetXpress"
- Successfully implemented a pioneering concept of prioritizing network to specific devices in automotive environments.
